## Minijet Professional and very portable

The MiniJet is a high pressure jetting machine for residential- and light commercial use.

Equipped with a silent and powerful electric motor and professional pump it is ideal for cleaning drains from 25 - 100 mm.

The MiniJet is easy to transport on stairs or in the elevator.

The motor/pump unit can be easily removed and used independently (with a NW 5 hose) from the hose reel meaning you can leave the hose reel section behind if the workspace is limited.
